WORK EXPERIENCE

Software Engineer at IXIS Digital January 2021- Current

<https://www.ixisdigital.com/>

- Designed a widget based framework to ensure reusability between client dashboards.
- Created a client theming system to 'white label' our product to suit the large corporations style.
- Built complex data visualizations for executives to glean quick information.
- Reimagined the React application architecture with speed and reusability in mind.
- Implemented a tour library that helped drive user interactions with a comments system.
- Mediate meetings between product owners and developers to solidify features in development.
- Created EPIC documents that influenced product direction,
- Presented newly created features to a company wide audience,
- Wrote SQL to aggregate data for displaying in the frontend application
- Setup up data access objects with GraphQL and SQLAlchemy for the backend API.

Part-time Software Engineer at Ambii Inc. May 2020- October 2020

<https://ambii.io/>

- Architected a web scrape that successfully collected over 300,000 small business emails which lead to a significant increase in the products concurrent users.
- Worked with AWS, Express.js, and React to create an in store messaging feature that allowed users to create and schedule custom advertisements for their customers.

Software Developer at Harris Computer September 2019- January 2021

<https://harriscomputer.com/>

- Created internal web applications with React, Flask, Node.js, Firebase, and RabbitMQ to empower the business team with information and action.
- Designed and created over 100 automated tests with TestComplete/Selenium.
- Used Ansible to streamline the deployment and conversion of core products.
- Styled and planned the UX and UI for internal web applications with Figma.
- Acted as a Jira Administrator.

- Create automated nightly process to detect new COBOL errors.
- Implemented code review process with GitLab
- Wrote Jira/Gitlab with Express.js webhooks to automated developer workflows.
- Created detailed documentation of new processes with Lucidchart and Confluence.
- Integrated nightly automated testing with Gitlab CI / CD pipeline.
- Integrated our testing API with our cloud orchestration software DockerOnDemand.

Research and Development Intern at Harris Computer **April 2019- September 2019**

<https://harriscomputer.com/>

- Write and maintain automated tests with Test Complete, Selenium, and Python to shorten the development timeline.
- Frequently fixed bugs related to CSS, HTML, and Javascript.
- Coded Java objects using ODBC to access both SQL Server and Oracle DB.
- Leverage Docker to test new features before deployment.
- Modernized old systems built using COBOL.

Integrated Game Hacker Intern at Hasbro **June 2018- August 2018**

<https://shop.hasbro.com/en-us>

- Managed a diverse group of interns from different disciplines to create a product presented to the senior management.
- Developed product prototypes with Unity, Arduino, C#, and C++ to prove the technical challenges are achievable.
- Created product prototypes unitiling AR/VR with Vuforia.
- Build a proof of concept app using trackerless, GPS based augmented reality.
- Create a Unity framework that allows artists to create complex LED animations for Arduinos.

Research Assistant at Landmark College Institute **January 2017- December 2018**

<https://www.landmark.edu/research-training>

- Designed a production application using Python and OpenSesame used in research as part of a National Science Foundation grant.
- Coded qualitative data using NVivo to better understand how the format of online class discussions affect learning.
- Used Python to capture data from multiple embedded devices, eye tracking, FNIRS, and EEG devices.
- Created visualization data for EEG and eye tracking machine data.
- Created assignments and example code in Java to facilitate learning with Android Studio.

PROJECTS

fire-words March 2022- Current

<https://fire-words-e41fa.web.app/>

debate-map January 2022- Current

<https://media-mapper.web.app/>

message-frame November 2020- December 2020

<https://message-frame.web.app/>

titos-tank September 2019- September 2019

EDUCATION

Bachelor Computer Science at Landmark College

2016 - 2018

INTERESTS

Sport

Skills acquired: soccer | rock climbing | snowboarding

Nerd Stuff

Skills acquired: microcontrollers | marvel | rouge likes | 3d printer
